

- **REMEMBER PLEASE!**
EPDM GASKET IS THE GUARANTEE OF OUR DOOR & WINDOW SYSTEMS.

Construction Group

Rubber Seals and Gaskets

For Windows & Door Systems, Sidings and Buildings

**WE PRODUCE EPDM
PROFILE RESISTANT TO
-70°C - + 130°C**

- ▶ PVC door and window system gaskets
- ▶ Aluminum door and window system gaskets
- ▶ Steel door gaskets
- ▶ Wooden door and window system gaskets
- ▶ Fly net gaskets
- ▶ External siding gaskets
- ▶ Dilatation gaskets
- ▶ Automatic door gaskets

EPDM RUBBER GASKET

• WHAT IS EPDM ?

EPDM is a synthetic rubber type specially improved against outdoor weather conditions, and used for window and door sectors.

EPDM rubber gasket is accepted as the best material in the world for leak proof gaskets; and the only gasket that "aluminum" and "windows" sectors can't do without for its stability, functional use, and strength against weather conditions.

• WHY EPDM ?

The reason EPDM is preferred all over the world is the perfect resistance against ozone and chemicals as well as outer weather conditions.

EPDM rubber is not affected by the oxygen in the air; and no substances are required, and the product functions for many years.

Permanent Deformation (elasticity); is the most important measure for rubber performance, and should not go over 35%. Products with EPDM rubber have very low deformation values. The best proof is use of EPDM rubber gaskets in both door-window profiles and automotive sectors for best insulation today in Europe.
